

Quilting set 3

Remember:

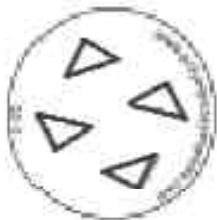

- Use only freshly conditioned clay. The softer, the better. The tool is capable of very high pressure and using cold, unconditioned clay is hard on it.
- Press the trigger slowly and wait a few seconds until the clay stops moving before pressing it again.
- Holding the tool by the trigger will lock the piston rod. Hold it by the handle when trying to pull back on the plunger.
- Don't use any solvents on the tool as they will deteriorate the plastic parts.
- To push out the disk and leftover clay, unscrew the retainer and pump the trigger. Then pull the disk off, followed by the clay.
- If the retaining ring is too tight, slightly loosen the handle end of the barrel. Don't forget to tighten it for the next use.

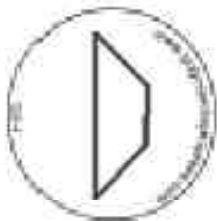

The set contains all elements to create this basic pattern:

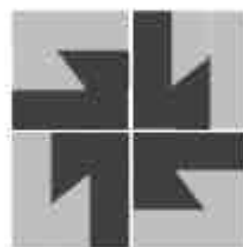

Some ways to arrange the basic pattern squares:

You can also create new shapes. For example:

And arrange them:

Look on our website www.polymerclayexpress.com for other sets.

We try to design all our sets to create squares slightly larger than 1 inch. They can easily be reduced to the same size and combined with each other.
